my problem is i never get "No database or data source" error. But if there is no movie. How can I fix this? I believe this is a problem on my side, as I tried the same code on another PC, and it works fine. A similar problem was given, but I cant find out how it was fixed. Do you have any idea? [filemaker] { [field "movietitle" type "TextField"] [field "movietimedownloaded"] [field "actors"] } A: The Issue was a Incompatibility issue that was specifically caused by a Nvidia driver change that was made on the new OS. This file has not yet been released: Filemaker Pro 14.5 User Guide - Windows 10 It appears that The easiest fix is to just re-down load the image of filemaker pro 2014. Q: Polarized Light and a Negative Emission Material The light that hits a compound with an even number of electrons (only one valence electron) emits radiation with the same wavelength as the incident light. The wavelength that is emitted here is a function of the number of atoms and the electron configuration. The assumption that all the electrons in the compound have the same wavelength is what compels me to question whether the chemical compound had an electron configuration of $(n=2)$ or $(n=2.5)$. If it had one of the two, then does the compound also have an inverted spectrum (ionisation potential) like the gas Xenon? A: It is generally the case that a bare positively charged ion will have an emitted spectrum at the shortest wavelength possible. I seem to recall (can't check), but I think this is made obvious by the fact that the centre of the ion will have the lowest potential, and will act as a point source of radiation. So for example, K^+ has an electron configuration of $1s^2$, with the lowest energy level of $\mathrm{1s^2}$, not $\mathrm{3d_{5/2}^2}$ (as you seem to have specified). So you can't have an emitted spectral line at that wavelength, as that has not a lowest energy level. Likewise you can't have an emission from the residual oxygen, which similarly has a configuration that doesn't correspond to a lower energy level
